EDUCATION

Carnegie Mellon University

Pittsburgh, PA

Master of Software Engineering, School of Computer Science (GPA: 3.9/4.0)

Dec. 2026

Relevant Coursework: Introduction to Computer Systems, Machine Learning in Production

Kyung Hee University

Gyeonggi, South Korea

Bachelor of Engineering in Computer Engineering (GPA: 3.73/4.3)

Aug. 2020

EXPERIENCE

NHN Cloud Corp (Top 3 CSP in South Korea)

Jul. 2020 - Jul. 2025

DevOps Engineer, Site Reliability Engineer

Gyeonggi, South Korea

- Built and operated 16 Kubernetes clusters (130+ nodes, 2,300+ pods) and CI/CD pipelines serving 30+ teams, using ArgoCD, Jenkins, Keycloak, and Harbor
- Reduced deployment task execution time by over 83% by redesigning ArgoCD with the App of Apps pattern and ApplicationSet
- Migrated 10 legacy products to Kubernetes across 6 regions with zero production incidents, leading containerization, Helm chart standardization, and automated certificate management
- Increased Loki log ingestion throughput by 52% and cut write failures by 74% by benchmarking with k6 load tests and tuning chunk encoding and ingestion rate limits
- Implemented auto-scaling and GSLB-based cross-region disaster recovery, and automated node maintenance across clusters with Ansible playbooks
- Led a certificate automation PoC with DigiCert HQ, cutting certificate management costs by 20% and earning the 2023 Employee of the Year award
- Operated 39 company-wide API gateway servers (CentOS, Apache, Tomcat) on Linux with 24/7 SRE incident response

NHN Corp (Top 10 IT Corp in South Korea)

Jan. 2020 - Jun. 2020

Cloud Engineering Student Intern

Gyeonggi, South Korea

- Designed HA infrastructure for web services on the TOAST Cloud platform with Apache Tomcat clustering and MySQL replication
- Configured CI/CD pipelines and service monitoring, and authored user guides for the Notification PaaS product API

Naver Corp (Top Search Engine Corp in South Korea)

Jul. 2019 - Aug. 2019

Software Engineering Student Intern

Gyeonggi, South Korea

- Refactored Naver Shopping Admin pages from legacy JSP stack to React, Node.js, GraphQL, and TypeScript
- Improved page performance and maintainability by introducing Apollo Client caching

PROJECTS

Financial Integration Service (Troutwood) - MSE Studio Project, Carnegie Mellon University

Aug. 2025 - Present

- Designed and built the end-to-end CI/CD platform on GitHub Actions for a serverless AWS monorepo (14 of 17 workflows, 6 solo), covering parallel CI, gated dev auto-deploys, guarded prod deploys, and per-branch ephemeral stacks
- Authored the initial AWS CDK (Python, CloudFormation) infrastructure (Lambda, SQS, DynamoDB, EventBridge) and migrated pipeline AWS auth to GitHub OIDC, eliminating long-lived access keys
- Built LocalStack-based integration-test CI deploying the real CDK app via cdklocal, and introduced gitleaks secret scanning and Python/Go coverage reporting as CI gates

SKILLS AND CERTIFICATIONS

Languages: Python, Shell Script, C++, JavaScript

Cloud & Infrastructure: Kubernetes, Docker, AWS (EC2, S3, Lambda, CloudFormation), Helm, GitHub Actions, ArgoCD, Jenkins, Ansible

Observability: Prometheus, Grafana, Loki, Jaeger

Certifications: Certified Kubernetes Application Developer (CKAD), Certified Kubernetes Administrator (CKA, 2022-2025)

Awards: Great Performance Awards (Employee of the Year), NHN Cloud (Jun. 2023)
